WHAT IS CLAIMED IS:

- 1. A method of treating or preventing a coagulase-negative staphylococcal infection in a patient comprising administering to the patient a sufficient amount of the *Staphylococcus epidermidis* SdrG fibrinogen binding protein to inhibit fibrinogen binding.
- 2. The method of Claim 1, wherein the infection is selected from the group consisting of septicemia, osteomyelitis or endocarditis.
- 3. The method of Claim 1, wherein the SdrG protein has the amino acid sequence of SEQ ID NO: 10.
- 4. The method of Claim 1, wherein the SdrG protein is encoded by a nucleic acid having the sequence of SEQ ID NO: 7.
- 5. The method of Claim 1, wherein the SdrG fibrinogen binding protein is administered in the form of a pharmaceutical composition comprising the SdrG protein in an amount effective to inhibit fibrinogen binding and a pharmaceutically acceptable carrier.
- 6. A method of treating or preventing a coagulase-negative staphylococcal infection in a patient comprising administering to the patient a sufficient amount of a polypeptide comprised of the ligand binding A region of the fibrinogen binding SdrG protein from *Staphylococcus epidermidis* to inhibit the binding of coagulase-negative staphylococci to fibrinogen.
- 7. The method of Claim 6, wherein the polypeptide has the amino acid sequence of amino acids 32 to 961 of SEQ ID NO:10.
- 8. The method of Claim 6, wherein the polypeptide is encoded by a nucleic acid having the sequence of nucleotides 102 to 2894 in SEQ ID NO:7.

- 9. The method of Claim 6, wherein the polypeptide is administered in the form of a pharmaceutical composition comprising the polypeptide in an amount effective to inhibit fibrinogen binding and a pharmaceutically acceptable carrier.
- 10. A method of treating or preventing a coagulase-negative staphylococci infection in a patient comprising administering to the patient a sufficient amount of an antibody which can bind to the SdrG protein of *S. epidermidis* to inhibit binding of coagulase-negative staphylococci to fibrinogen.
- 11. The method of Claim 10, wherein the SdrG protein has the amino acid sequence of SEQ ID NO: 10.
- 12. The method of Claim 10, wherein the SdrG protein is encoded by a nucleic acid having the sequence of SEQ ID NO: 7.
- 13. The method of Claim 10, wherein antibody is administered in the form of a pharmaceutical composition comprising the antibody in an amount effective to inhibit fibrinogen binding and a pharmaceutically acceptable carrier.
- 14. A method of treating or preventing a coagulase-negative staphylococci infection in a patient comprising administering to the patient a sufficient amount of an antibody which can bind to the ligand binding A region of the SdrG protein of *S. epidermidis* to inhibit binding of coagulase-negative staphylococci to fibrinogen.
- 15. The method of Claim 14, wherein the ligand binding A region has the amino acid sequence of amino acids 32 to 961 of SEQ ID NO:10.
- 16. The method of Claim 14, wherein the ligand binding A region is encoded by a nucleic acid having the sequence of nucleotides 102 to 2894 in SEQ ID NO:7.

- 17. The method of Claim 14, wherein antibody is administered in the form of a pharmaceutical composition comprising the antibody in an amount effective to inhibit fibrinogen binding and a pharmaceutically acceptable carrier.
- 18. A method of reducing coagulase-negative staphylococcal infection of an indwelling medical device comprising coating the medical device with a sufficient amount of the *Staphylococcus epidermidis* SdrG fibrinogen binding protein to inhibit fibrinogen binding to the device.
- 19. The method of Claim 18 wherein the medical device is selected from the group consisting of vascular grafts, vascular stents, intravenous catheters, artificial heart valves, and cardiac assist devices.
- 20. A method of inducing an immunological response comprising administering to a patient an immunologically effective amount of the *Staphylococcus epidermidis* SdrG fibrinogen binding protein.
- 21. A method of inducing an immunological response comprising administering to a patient an immunologically effective amount of the ligand binding A region of the *Staphylococcus epidermidis* SdrG fibrinogen binding protein.
- 22. A method of identifying compounds that inhibit coagulase-negative staphylococci comprising combining the compound with the *Staphylococcus epidermidis* SdrG fibrinogen binding protein or with the ligand binding A region of the *Staphylococcus epidermidis* SdrG fibrinogen binding protein and measuring the binding of the protein to a binding molecule, wherein the compound inhibits coagulase-negative staphylococci if binding to the binding molecule is inhibited.
